Profile

I am a full stack software developer from Argentina.

I work mainly with React and Python, but I'm also proficient with Angular and Node.

I have worked as a test automation engineer too. I did this for 3 years with Java, Python and Ruby.

I love working on all parts of the software development process and trying out different languages and tools whenever possible.

Programming Languages

- Javascript
 - Typescript
 - Python
-

Skills

- Microservices architecture
 - RESTful apis (Flask, Node)
 - React
 - Angular
 - Selenium Web Driver
 - Docker, Kubernetes
 - AWS
 - SQL: Postgres, Mysql, Sqlite
 - Elasticsearch, Opensearch
 - NOSQL: MongoDB, Couchbase, Redis
 - Camunda Platform
-

Education

System Analysis - ISFT N° 151

Career Summary

Full Stack Engineer

The Bridge Corporation (Jun 2018 - Present)

- I work as a full-stack developer in a microservice infrastructure with multiple interconnected projects.
- I'm working on a team which develops a digital marketing platform for companies and advertisers from the US.
- We have some UI's built with Angular and a new one with React.
- All the backends and microservices are written in Python.
- The project does an intense use of AWS platforms and Camunda Platform

Test Automation Engineer

Rise Interactive (Oct 2017 - May 2018)

- Worked as responsible for test automation strategy, including ui and api testing altogether with the management of the continuous integration server.

Test Automation Engineer

Globant (Apr 2015 - Oct 2017)

- Worked in different projects for multiple clients using several programming languages.
 - First worked in an UI testing project for an internal application of a client. My tasks were fixing tests and refactoring the code of a framework based on C# Selenium Webdriver, NUnit.
 - Then I was briefly assigned to a project based on Javascript using Leadfoot webdriver and Intern test runner. We wrote tests for an internal web ui library.
 - After that I started working on a Python project, writing UI and API integration tests. We used Behave and Selenium Webdriver.
 - Lastly, I worked on a UI testing project for more than a year which consisted in two stages. First stage was maintaining and improving a test suite based on Java, TestNG and Selenium and the second one was migrating the existing tests to a Javascript group of tests.
-
